

AZUD GreenTEC

Special dripline for microirrigation in landscaping and professional gardening, with and without turbulent dripper.

www.azud.com

What it is

The dripline for microirrigation with and without turbulent dripper has a contrasted history and efficiency for the surface localized irrigation installations, guaranteeing uniformity and maintaining the flow rate stability over time. The dripline is manufactured by the extrusion process, integrating in such process the rounded dripper.

Optimum hydraulic performance. Both the dripper and pipeline are completely cylindrical and keep a minimal hydraulic interaction with the circulating flow rate.

Application

- Professional microirrigation for gardening.
- Landscaping projects in urban environments.
- Great sport areas.
- Theme parks.
- Highways, roads, motorways.
- Residential areas.

Advantages

- DS Technology, top protection against clogging.
- Inlet filter with self-cleaning effect.
- Water saving.
- Energy saving due to the performance at low pressures.
- Landscape adaptation.
- Integrated system: Reduction of installation costs.
- Better irrigation control.
